|---|---|
| MedKoo Cat#: 563014<br>Name: AG1478 HCl<br>CAS#: 170449-18-0<br>Chemical Formula: $C_{16}H_{15}Cl_2N_3O_2$<br>Molecular Weight: 352.21 |  |
| Product supplied as: | Powder |
| Purity (by HPLC): | ≥ 98% |
| Shipping conditions | Ambient temperature |
| Storage conditions: | Powder: -20°C 3 years; 4°C 2 years. |
| | In solvent: -80°C 3 months; -20°C 2 weeks. |

**1. Product description:**
AG1478 HCl is an inhibitor of epidermal growth factor receptor protein.

**2. CoA, QC data, SDS, and handling instruction**
SDS and handling instruction, CoA with copies of QC data (NMR, HPLC and MS analytical spectra) can be downloaded from the product web page under "QC And Documents" section. Note: copies of analytical spectra may not be available if the product is being supplied by MedKoo partners. Whether the product was made by MedKoo or provided by its partners, the quality is 100% guaranteed.

**3. Solubility data**

| Solvent | Max Conc. mg/mL | Max Conc. mM |
|---|---|---|
| DMSO | 3.52 | 9.99 |

**4. Stock solution preparation table:**

| Concentration / Solvent Volume / Mass | 1 mg | 5 mg | 10 mg |
|---|---|---|---|
| 1 mM | 2.84 mL | 14.20 mL | 28.39 mL |
| 5 mM | 0.57 mL | 2.84 mL | 5.68 mL |
| 10 mM | 0.28 mL | 1.42 mL | 2.84 mL |
| 50 mM | 0.06 mL | 0.28 mL | 0.57 mL |

**5. Molarity Calculator, Reconstitution Calculator, Dilution Calculator**
Please refer the product web page under section of "Calculator"

**6. Recommended literature which reported protocols for in vitro and in vivo study**
In vitro study

**7. Bioactivity**
Biological target:

AG-1478 hydrochloride (Tyrphostin AG-1478 hydrochloride) is a selective EGFR tyrosine kinase inhibitor with IC50 of 3 nM.

# Product data sheet

In vitro activity

To this end, HeLa cells were infected with either EMCV or CVB3 for 30 min, after which virus-containing medium was replaced with compound-containing medium. Eight hours later, cells were lysed by freeze-thawing to determine the total virus titers by endpoint dilution. As we have previously shown, AG1478 did not perturb CVB3 replication (Fig. 1B). However, EMCV was inhibited by AG1478 in a dose-dependent manner, with a complete inhibition at 25 μM. The inhibition observed with AG1478 was comparable to that obtained with 10 μM AL-9 (Fig. 1B). In parallel, a cell viability assay was performed to verify that the antiviral activity of AG1478 was not due to cytotoxic effects (Fig. 1B).

In vivo activity

As expected, CD31 was markedly increased in retinas of DM mice compared with the non-diabetic group (Figure 5A). In addition, the number of retinal vessels was significantly increased in the DM group (Figure 5C). However, treatment with AG1478 markedly reduced the number of CD31-positive cells and vessel density in retinas of DM mice (Figure 5A,C, respectively), supporting an anti-angiogenic effect of AG1478.
